Art Unit: 1644

DETAILED ACTION

Applicant's amendment, filed 07/28/2006, has been entered.

Claims 7, 8, 10, 14, 16, 17 have been canceled.

Claims 21-23 have been added.

Claims 1-6, 9, 11-13, 15 and 18-23 are pending and currently under Restriction Requirement.

It is noted that claim 20 depends from a canceled claim, claim 17. Claim 20 will be placed into a restriction group when Applicant corrects its dependency.

REQUIREMENT FOR UNITY OF INVENTION

As provided in 37 CFR 1.475(a), a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in a national stage application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim. See 37 CFR 1.475(e).

WHEN CLAIMS ARE DIRECTED TO MULTIPLE CATEGORIES OF INVENTIONS

As provided in 37 CFR 1.475(b), a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

- (1) A product and a process specially adapted for the manufacture of said product; or
 - (2) A product and process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or

(5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

Otherwise, unity of invention might not be present. See 37 CFR 1.475(c).

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1 and 5, drawn to an isolated complex comprising one or both of complement activation product C5.

Group II, claim(s) 2, 6, 18, 21 and 23, drawn, in part, to a method for inhibiting the formation of a non-covalent combination of membrane attack complex and circulating immune complex comprising application of an inhibitor in patients suffering from complement and circulating immune complex mediated diseases wherein said inhibitor is a monoclonal antibody.

Group III, claim(s) 2, 6, 18, 21 and 23, drawn, in part, to a method for inhibiting the formation of a non-covalent combination of membrane attack complex and circulating immune complex comprising application of an inhibitor in patients suffering from complement and circulating immune complex mediated diseases wherein said inhibitor is a peptide mimotope.

Group IV, claim(s) 2, 6, 18, 21 and 23, drawn, in part, to a method for inhibiting the formation of a non-covalent combination of membrane attack complex and circulating immune complex comprising application of an inhibitor in patients suffering from

Art Unit: 1644

complement and circulating immune complex mediated diseases wherein said inhibitor is a small molecule.

Group V, claim(s) 3 and 13, drawn to a method for screening candidate compositions or processes for an ability for inhibiting the formation of membrane attack complex on circulating immune complex comprising assessing the composition or process for the reduction in membrane attack complex associated with circulating immune complex.

Group VI, claim(s) 4 and 22drawn to a method of monitoring the formation of membrane attack complex and other split products of C5 on circulating immune complex comprising measuring the formation of said products and assessing for symptoms of said disease.

Group VII, claim(s) 9, 11 and 19 drawn to a process for quantitative measurement for the presence of complement C5 and C5b-9 associated with circulating immune complex.

Group VIII, claim(s) 12, drawn to a process for quantitation of immunoglobulin isotype composition of circulating immune complex or antigens bound within circulating immune complex comprising using an ELISA based on receptor based capture mechanism.

Group IX, claim(s) 15, drawn to a process for screening a composition that targets blocking of complement activation and modulating the binding of serum acute phase proteins bound to circulating immune complex.

The groups of inventions listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Evans et al. taught an isolated complement component, C5, which reads on claim 5 of the present

Art Unit: 1644

application (see U.S. Patent 6,355,245; claims 68 and 69). As such, the technical feature does not contribute over the prior art and therefore, the unity does not exist.

Species Election

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

If Group I is elected, Applicant is required to elect a specific complex (e.g., C5).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise require all the limitations of an allowed generic claim. Currently, the following claim(s) are generic: claim 1, for example.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If

claims are added after the election, applicant must indicate which of these claims are readable on the elected invention or species.

Should applicant traverse on the ground that the inventions have unity of invention (37 CFR 1.475(a)), applicant must provide reasons in support thereof. Applicant may submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. Where such evidence or admission is provided by applicant, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Rejoinder

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double

Application/Control Number: 10/587,819 Page 7

Art Unit: 1644

patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SHARON WEN whose telephone number is (571)270-3064. The examiner can normally be reached on Monday-Thursday, 8:30AM-5:00PM, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ram Shukla can be reached on (571)272-0735. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
